**Distribution of products associated with image through network,  
involves automatically employing content of interaction to determine  
image to be displayed**

...Inventor: **LAND S D**

Abstract (Basic):

... Content of an interaction is employed to determine an **image** to be displayed, which is associated with the information indicating each product that is available for use with the **image**. Information associated with **image** is employed automatically to generate a representation of each product. The **image** and the representation is automatically displayed in a page for providing available product on selection.

... a) Computer readable medium with instruction for enabling the product associated with **image** to be provided to user...

...b) System for enabling a product associated with an **image** to be provided to user...

...c) Method for enabling a product associated with an **image** to be ordered over a network...

...d) System for placing an order for a product associated with **image** over a network...

...For enabling product associated with **image** to be provided to user such as picture, electronic postcard, poster, slide show, puzzle, screen saver, calendar, cup, stationary, invitation, presentation, also for browsing relational database with products or **image** based searches, subscription pushes and hyperlinks that are associated with products or categories...

...Enables updated information related to new products and **images** to be sent to a subscriber. Enables the presentation of available **images** and related products to be customized according to the type of subscription that a user...

#### ABSTRACT

PROBLEM TO BE SOLVED: To provide a data base delivery system to efficiently deliver, product information data such as **product** names and prices to be **displayed** as electronic **picture** , from a **database** server.

SOLUTION: This system is provided with a data server DS which stores an information database S and broadcasts by reception of ID data, and one or more electronic picture displaying means A (A1 to An) which mounts a data selection reception means to select and receive predetermined information data Sa from the database S which is broadcasted by the reception of ID data via a satellite relay transmitting means L from the data server DS. Based on the predetermined information data Sa delivered to the electronic picture displaying means A from the data server DS by selection reception direction of the data selection reception means T, the electronic picture displaying means A outputs information as picture on a display.

#### ABSTRACT

PROBLEM TO BE SOLVED: To provide a product sales method capable of purchasing a product even when a user has only an image about the product which the user intends to buy.

SOLUTION: A keyword of the product which the user intends to buy is inputted in a user terminal, and the image for selecting the product stored in the product selection database is retrieved based on the keyword. A product sales center server prepares an image for selecting the product based on the retrieved image for selecting the product, and displays it on the user terminal. An image similar to the product intended to be purchased

is selected among the **displayed** screen for selecting the **product**, and the product **image stored** in the product database is retrieved based on the selected image. The product sales center server prepares the screen for selecting the product based on the retrieved product image, and displays it on the user terminal. The product desired to buy is selected among the displayed product images and the processing is completed after the purchasing procedure.

#### ABSTRACT

PURPOSE: To easily display a present product exhibition state by providing a handy terminal reading the bar code of a product and a means converting bar code data into a mark showing the kind of the product.

CONSTITUTION: A product picture data storing means 3 stores a still photograph taken by a camera 1 at every product as picture data. The handy terminal 9 reads the bar code of the product and bar code data is converted into the mark showing the kind of the product by a lap top input means 10. Next, the kind and number of the exhibited product are inputted to a memory 4 by being given reading order in accordance with the arrangement of the shelf. A program control means 8 combines product picture data and exhibition shelf arrangement **picture** data which are **stored** in the product **picture** data **storing** means 3 and a **product** exhibition state **display** buffer 2 in accordance with the kind and amount of the product inputted in the memory so as to display the state where the product is exhibited in the exhibition shelf in a monitor 6 as a picture.

Abstract (Basic): WO 200373758 A1

NOVELTY - The method involves receiving a video image and a trigger in a video signal. A frame of the received video image is digitized in responsive to the received trigger. The digitized image is stored in a memory, and the downloaded software is invoked to perform a function related to a **product**. The **stored image** is **displayed** in response to the software invoked.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a television system.

USE - Used for capturing video clips in television commerce..

ADVANTAGE - The method is capable of providing images for the products offered on television, thereby improving the transmission bandwidth and local storage for the images.

DESCRIPTION OF DRAWING(S) - The drawing shows a flow chart for a video clipping method.

Abstract (Basic): US 20020118294 A1

NOVELTY - A control unit corrects the original image data using image data obtained from a photographed color chart data. The photographed color chart data is obtained using same type of light source as used to obtain the original image data.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Image processing method;
- (2) Machine readable recorded medium storing program for executing image processing; and
- (3) Program product for executing image processing.

USE - For sales of products e.g. clothes, lipsticks, etc., by **displaying product image** in communication **network** or television broadcasting.

ADVANTAGE - By dividing the light source color chart data, correction is rapidly performed. Enables seller to efficiently present the transaction information and also the consumer is able to confirm the color and presentation of the product, without any special cost.

DESCRIPTION OF DRAWING(S) - The figure shows the contents of a color chart database.

Abstract (Basic): KR 2002023607 A

NOVELTY - A series products auction system and method using an Internet network are provided to improve the service and convenience of an Internet auction by enabling a buy to get the desire product information or product purchase information so as to display the products being not put to the auction.

DETAILED DESCRIPTION - The system comprises a client(100)

connecting to a server using the Internet network(10), a list storage(11) storing the list information for series products closely relating each other, a list searching part(12) searching and managing the products fitting the list on the basis of the products stored in the list storage, a list display storage(13) **storing the display image** of list **products**, and a list **display** manager(14) managing the list display storage. Also, the system includes an auction products list storage(15) storing the list information of the auction product, an auction products list manager(16) providing the list information of auction product fitting to the information transmitted from the list searching part, an auction product display storage(17), and a display manager(18) providing the display information of the auction product extracted from the list searching part.

NOVELTY - A service provider network has a database which stores three dimensional image data and sample data of various products. The web server in the network has a program operative in connection with the **database** and combines **product image** to three dimensional **sample** image on the web page based on the demand from the client.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for operating method of product selling system.

USE - For selling products such as air conditioner, electronic appliances, sinks, shelves in kitchen, furniture, cupboards, wash basin in bathroom, lighting fixture, interphones, elevators, escalators using on-line product selling system.

ADVANTAGE - Virtual installation of the product at client place improves the reliability of product, reduces returns of sold products, eases the selection of products and eliminates necessity of personal visit to clients for advertisement.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart explaining on-line product selling method.

Abstract (Basic): WO 200111553 A1

NOVELTY - Image descriptor generated by analyzing background compensated image signal corresponding to object (11) placed on view plate (10), is compared with **stored** data sets representing **image descriptors** for all varieties of specified **products**, to identify data set with highest correlation. Recognition result of product specifying visual representation of product is displayed, for entry into register system.

DETAILED DESCRIPTION - The view plate (10) placed at specified identification station is illuminated from backside in order to obtain a backlight image viewable from the front side of the plate. The backlight image captured by positioning the digital image capturing unit relative to the plate is stored as reference unit. A digitized image signal which specifies the captured image is processed by removing the reference image and background compensated image signals are obtained. The compensated image signals are analyzed to generate an image descriptor having characteristic features such as size and shape of the item to be identified. The data sets representing image descriptors for all varieties of specified products are stored in a computerized product database. An INDEPENDENT CLAIM is also included for the item recognition apparatus.

USE - For item recognition at point-of-sale in retail outlet such as at hardware store check out, for POS checkout station.

ADVANTAGE - Since the data set having highest correlation with the data stored in database, enables the check out operator to visually rectify the correct match from the displayed data.

DESCRIPTION OF DRAWING(S) - The figure shows the overall view of POS check out station.

|------------|------|--------|-------------|--------------|
| JP 9044737 | A    | 15     | G07F-009/02 |              |

Abstract (Basic): JP 9044737 A

The machine has a second image output unit (4b) which converts an image data, stored in a second video random-access memory (3b), to an

image signal. It has a sample display unit (5a) which displays the image signal which was output by a first image output unit (4a). An advertisement display unit (5b) displays the image signal which was output by the second image output unit.

A counter (10-1-10n) counts the number of stocked products. An operating unit (8) executes a maintenance operation corresponding to the displaying of an image. A maintenance display unit (9) displays the count value of the counter and the contents of a maintenance operation.

ADVANTAGE - Enables easy alteration of **product sample** content by **displaying image** of **stored** sample or **image** of newly received sample. Enables immediate checking of inventory quantity of each product, and improves efficiency of product supplementing operation. Enables product displaying without producing product sample and advertisement panel.

Abstract (Basic): EP 1130525 A2

NOVELTY - Content of an interaction is employed to determine an image to be displayed, which is associated with the information indicating each **product** that is **available** for use with the image. Information associated with image is employed automatically to generate a representation of each product. The image and the representation is automatically displayed in a page for providing **available product** on selection.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(a) Computer readable medium with instruction for enabling the product associated with image to be provided to user;

(b) System for enabling a product associated with an image to be provided to user;

(c) Method for enabling a product associated with an image to be ordered over a network;

(d) System for placing an order for a product associated with **image** over a **network** ;

(e) Method for enabling a product associated with a sound to be provided to user

USE - For enabling product associated with image to be provided to user such as picture, electronic postcard, poster, slide show, puzzle, screen saver, calendar, cup, stationary, invitation, presentation, also for browsing relational **database** with products or **image** based searches, subscription pushes and hyperlinks that are associated with products or categories.

ADVANTAGE - Enables updated information related to new products and images to be sent to a subscriber. Enables the presentation of **available** images and related **products** to be customized according to the type of subscription that a user has purchased/selected.

DESCRIPTION OF DRAWING(S) - The figure shows an architectural overview of objects referred by artificial intelligence engine.

INTL CLASS: G06F-017/60; B42D-005/04

**ABSTRACT**

PROBLEM TO BE SOLVED: To provide an order receiving and **ordering** method for a **calendar** to which individual information is attached, by which an individual can order by using the Internet, select an image or the like from prepared ones matched with preference and easily specify an anniversary or the like.

SOLUTION: A server connected to the Internet is provided with a means for storing a basic pattern of a layout of images and illustrations and the layout of a date column with a blank, a means for **storing** the **images** and the illustration to be used at layout positions of the images and the illustrations, a means for inputting and storing the individual information and/or a mark to be provided in the blank of the date column, a means for selecting the **stored images** and illustrations, a means for displaying and confirming the individual information and/or the mark and the selected images and illustrations and a means for sending the mail of order confirmation to an ordering person when the ordering person is confirmed. An order is received by confirmation of the order by the mail.

INTL CLASS: B41J-021/16; B42D-005/04; G06F-003/12

**ABSTRACT**

PROBLEM TO BE SOLVED: To provide a calendar making/dispatching system which enables a making and a dispatching operation to be performed easily and in a short time, and also is best suited for receiving small-lot **orders** .

SOLUTION: Under this **calendar** making/dispatching system, information is entered which is based on the entry contents of an application form 10 having a calendar type selection column 15 for selecting a calendar type and allocating a desired pictorial pattern image selected from plural pictorial pattern image to every optional mouth and a user information entry column 17 for making the entry of user information including addressee information comprising the address, name or the like of an

applicant for a calendar or the address, name or the like designated by the applicant. Further, the pictorial pattern **image** designated in a **data base** file which is previously entered to an entry part is printed on the calendar paper after combining the image with the calendar type 15a designated. At the same time, the addressee information is printed on the cover paper of the calendar based on the data described in the user information entry column 17, and the originally made calendar is dispatched to the applicant. Thus it is possible to shorten time required from the application for the calendar to its dispatch.

#### ABSTRACT

PURPOSE: To display plural pieces of schedule data within a limited display area.

CONSTITUTION: A calendar preparing part 41 of a CPU 4 prepares and displays the calendar of a certain month and continuously, **picture** symbol data **stored** in a **picture** symbol data part 113 are displayed on the **calendar**. Next, it is judged in **order** to display a period schedule data on the calendar whether the picture symbol data are contained in the period of the period schedule data or not and when the picture symbol data are not contained, those data are not displayed but a flag showing the overlap of data is raised on both the data so that the display can be switched at the overlapped part during fixed time.

Abstract (Basic): EP 1130525 A2

NOVELTY - Content of an interaction is employed to determine an image to be displayed, which is associated with the information indicating each product that is available for use with the image. Information associated with image is employed automatically to generate a representation of each product. The image and the representation is automatically displayed in a page for providing available product on selection.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Computer readable medium with instruction for enabling the product associated with image to be provided to user;
- (b) System for enabling a product associated with an image to be provided to user;
- (c) Method for enabling a product associated with an image to be ordered over a network;
- (d) System for placing an order for a product associated with **image** over a **network** ;
- (e) Method for enabling a product associated with a sound to be provided to user

USE - For enabling product associated with image to be provided to user such as picture, electronic postcard, poster, slide show, puzzle, screen saver, calendar, cup, stationary, invitation, presentation, also for browsing relational **database** with products or **image** based searches, subscription pushes and hyperlinks that are associated with products or categories.

ADVANTAGE - Enables updated information related to new products and images to be sent to a subscriber. Enables the presentation of available images and related products to be customized according to the type of subscription that a user has purchased/selected.

DESCRIPTION OF DRAWING(S) - The figure shows an architectural overview of objects referred by artificial intelligence engine.

Designated States (Regional): AL AT BE CH CY DE DK ES FI FR GB GR IE IT  
LI LT LU LV MC MK NL PT RO SE SI

Abstract (Basic): EP 1077414 A2

NOVELTY - Selected text is used automatically to generate a query searching for related **images** in a **database**. The **images** may include video and audio. An image is located in the database by a search engine and a thumbnail or higher quality image is associated with the text. An electronic purchase system may be used to purchase high quality versions of the **image** from the **database** owners for insertion in the text. A data handling software component is used to handle the information returned from a search and converting this into a displayed image. Other software components handle other aspects of the data manipulations.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for

(a) a system for obtaining an **image** from a **database** for pasting into a document

(b) a computer readable medium carrying instructions for obtaining an **image** from a **database** for pasting into a document

(c) and a method for electronically purchasing an **image** ver a **network**.

USE - Obtaining images relating to specified text automatically.

ADVANTAGE - None expressly given.

Claims

Detailed Description

... the digitized image in the memory; invoking software to perform a function related to the **product**; and **displaying** the **stored image**, responsive to the invoking the software. In another aspect, the present invention is a television...digitized image; an input device for invoking software to perform a function related to the **product**; and a **display** screen for **displaying** the **stored image**, responsive to the invoking the software.

BRIEF DESCRIPTION OF THE DRAWINGS

The objects, advantages and...

Claim

... image in the memory;  
invoking the downloaded software to perform a function  
related to the **product** ; and  
**displaying** the **stored image** , responsive to the invoking the  
software.  
2 . The method of claim 1, further comprising downloading...digitized  
image;  
an input device for invoking software to perform a function  
related to the, **product** ; and  
a **display** screen for **displaying** the **stored image** , responsive  
to the invoking the software.  
  
21 The television system of claim 20, further comprising...storing the  
digitized image;  
means for invoking software to perform a function related to  
the **product** ; and  
means for **displaying** the **stored image** , responsive to the  
invoking the software.

Detailed Description

Detailed Description

... system management; provides quick launch buttons, system  
resource gauge, drag-and-drop printing and faxing, **calendar**, etc.

Form 1304

Form Services enable applications to use fields to display and collect  
data...to a table of physical addresses. The switch can build the table  
by "listening" to **network** traffic and determining which network nodes  
are connected to which switch port.

Conference Title: Optical Engineering for Sensing and Nanotechnology (ICOSN '99)

Conference Sponsor: SPIE; Opt. Soc. Japan

Conference Date: 16-18 June 1999 Conference Location: Yokohama, Japan

Language: English Document Type: Conference Paper (PA); Journal Paper (JP)

Treatment: Theoretical (T); Experimental (X)

Abstract: We propose a prototype of the spectral vision system, which can be used to measure a color spectrum and two-dimensional spectral images. We first designed a low-dimensional broadband color filter set with a constraint of positive spectral values by the unsupervised neural network. Then we constructed a compact size optical setup for the spectral synthesizer, which can be used to synthesize the light corresponding to the spectral characteristics of the color filter. In the optical setup we implemented the color filters by the use of a liquid crystal spatial light modulator. In our experiments we illuminated a sample of a real world scene by the synthesized lights and detected the intensity images of the filtering process by the CCD-camera. The intensity images correspond to the optically calculated inner products between the color filters and a sample. The data obtained from the filtering process is only a few monochrome images and therefore convenient for **storing** and transmitting spectral **images**. From the detected inner **products** we reconstructed the **sample**'s color spectra by the use of inverse matrix. We present experimental results of measuring a single color spectrum and two-dimensional spectral images. (14 Refs)

Treatment: Practical (P)

Abstract: The paper discusses the organization of design knowledge in the domain of industrial design. It introduces a typological model for the description and decomposition of the design knowledge that can be extracted from existing form concepts. This model provides a framework for the structure of an **image database**, which makes use of visual **representations** of prior designed **products**, in order to create a domain specific knowledge base from which the industrial designer can acquire and apply design knowledge in the generation and development of new form concepts. (11 Refs)

**Time to burn -- TrueTime's TimeVault offers a very accurate standard time reference to enterprise networks**

Zeichick, Alan

InternetWeek , October 9, 2000 , n832 p46-49, 2 Page(s)

ISSN: 0746-8121

Company Name: TrueTime

URL: <http://www.truetime.com>

Product Name: TimeVault

Languages: English

Document Type: Hardware Review

Grade (of Product Reviewed): B

Geographic Location: United States

Presents a favorable review of TimeVault (\$4,395), a Network Time Protocol (NTP) server appliance from TrueTime of Santa Rosa, CA (707).

Explains that it can acquire extremely accurate time from a variety of sources. Highlights its ease of setup and configuration, various built-in administrative interfaces, utilization of built-in Global Positioning System (GPS) to read time being continuously transmitted from 29 low-earth-orbit satellites, periodic dialling of the United States National Institute of Standards and Technology's (NIST) Automated Computer Time Service (ACTS) using a built-in modem and dedicated phone line, and ease of installation. Mentions, however, that it does not include NTP time clients or links to them. Concludes that it is extremely useful in situations where there's a need for extreme time precision, such as in electronic commerce and **network** management. Includes a **photo**, two sidebars, two screen **displays**, and a **product** summary. (MEM)

**The Federal Web, NTIS database, and more...**

Notess, Greg R

Online, January 1, 2000, v24 n1 p57-61, 5 Page(s)

ISSN: 0146-5422

Languages: English

Document Type: Articles, News & Columns

Geographic Location: United States

Reports on the controversy surrounding the launching of usgovsearch, an online service combining the databases and expertise of the Northern Light Technology LLC search engine and the commercial government organization of the National Technical Information Service (NTIS). Explains why the Web site's access fee angered the public. Outlines how the Web site is set up and what searches can be run. Says that the main advantage is its inexpensive access to the NTIS database. Thinks that the Web site is worth a look from anyone who frequently searches for government information. Observes that it has a larger database than other government search services and is one of the few that looks for government sites beyond the .gov and .mil domains. Likes that work on usgovsearch has enabled Northern Light to offer limited free access to the entire NTIS **database**. Includes one **photo**, one sidebar, three screen **displays**, and a **product** summary. (CT)

Hardware/Software Compatibility: Ethernet

Geographic Location: United States

Presents a favorable review of the OneTouch (\$3,695, 10Mbit/sec; \$4,995, 10/100Mbit/sec), a hand-held Ethernet network protocol analyzer from Fluke of Everett, WA (206, 800). Explains that this is a simple testing device which is designed to be easy to use for less experienced network support staff. Features a touch-sensitive LCD display, rechargeable battery pack, and AC adapter. Claims that it is a reliable tool for automated testing and system monitoring. Reports that it performed well during testing. Complains, however, that the documentation is somewhat lacking. Concludes that this is a good troubleshooting tool for frontline **network** support. Includes one **photo**, one **product** summary, and three screen **displays**. (kgh)

**HP switches slash broadcast traffic -- Although awkward to use, software can boost net performance**

Peterson, Eric

PC WEEK, April 21, 1997, v14 n16 p71, 76, 2 Page(s)

ISSN: 0740-1604

Company Name: Hewlett-Packard

Product Name: HP AdvanceStack Series

Languages: English

Document Type: Hardware Review

Grade (of Product Reviewed): C

Geographic Location: United States

Presents a mixed review of HP AdvanceStack Series, beta (\$2,899), a series of network switches from Hewlett-Packard Co. of Palo Alto, CA (800). Features hardware-based Layer 3, IP and media access control (MAC), and AdvanceStack Assistant software that provides Layer 2 speeds and Automatic Broadcast Control (ABC) features. Notes that these features work well for traffic-intensive sits, where they greatly improve traffic. However, complains that the product is lacking in troubleshooting features, despite its intended capabilities. Concludes that this is an intelligent solution that is worth consideration by small switched **networks**. Includes one **photo**, one **product** summary, three screen **displays**, and two sidebars. (kgh)

Descriptors: Switches; Network Management; Speed; Administration; Hardware Review; Networks

95; Microsoft Windows; Microsoft Windows NT; NetWare; OS; Unix

Geographic Location: United States

Presents a favorable review of PowerRite Pro 2 (\$879), an uninterruptible power supply (UPS) from Deltec Electronics Corp. of San Diego, CA (800). Runs on either DOS, NetWare, OS/2, Unix, or Windows 3.x, 95, or NT. Explains that it is designed to protect small, single-protocol networks. Features 1,500VA of power and notes that its response to power failures is immediate. Offers power management software that can direct the shut-down sequence in the event of a power failure. Notes that it can also schedule regular power-downs for specific PCs. Reports that it worked as promised during testing. However, complains of its inability to handle multiprotocol environments. Concludes that this is a capable solution for small **networks**. Includes one **photo**, one screen **display**, and one **product** summary. (kgh)

Document Type: Buyer and Vendor Guide

Grade (of Product Reviewed): B; B; A; B

Hardware/Software Compatibility: IBM PC Compatible; Macintosh; Unix workstation

Geographic Location: United States

Introduces a buyers' guide to multiplatform backup software. Features a table comparing the hardware support, client support, backup activation, configuration, and management station, notification, client packs, and autoloader program of four products from four companies. Product reviewed and their ratings (out of five) are: Backup Exec (\$149 base price) from Arcada Software (800) - 3.30; ARCserve v6.0 (\$795 base price) from Cheyenne Software (800), which is a good server-centric network backup solution - 3.43; NetWorker (\$750 base price) from Legato Systems (415), which offers a very flexible architecture for backup scheduling and tape assignment - 4.28; and Backup Director (\$349 base price) from Palindrome Corp. (800), which is robust but not a complete solution - 2.80. Given the Editor's Choice award was **NetWorker**. Includes four **photos**, two screen **displays**, a table, and a **product** resource guide. (dpm)

Document Type: Hardware Review

Grade (of Product Reviewed): B

Hardware/Software Compatibility: IBM PC Compatible; Microsoft Windows

Geographic Location: United States

Presents a favorable review of the IBM LaserPrinter 4039 12R plus by Lexmark (\$1,749), a laser printer from Lexmark International, Inc. of Lexington, KY (606). Requires an IBM PC compatible with Microsoft Windows. Reports the printer produces 12 pages per minute, and features 600-dpi resolution, 36 built-in PCL 5 fonts, PostScript Level II, bidirectional communications, and a 200-sheet letter-size drawer that offers many paper-handling options. Says the printer produced good detail, clear sharp text, and excellent gray scale images. Lauds the fact that the printer can be monitored or controlled by any computer on the network. Warns that the PostScript Level II page description languages are not guaranteed fully compatible, and that remote-control functionality is not available for Windows for Workgroups or Windows NTAS. Concludes it is a terrific **network** printer. Includes one **photo** , one screen **display** , and **product** information. (bjp)

**Title: Face value (desktop video conferencing)**

Author(s): Bray, P.  
Journal: Which Computer? vol.17, no.3 p.78-80, 83  
Publication Date: March 1994 Country of Publication: UK  
CODEN: WHCOD8 ISSN: 0140-3435  
Language: English Document Type: Journal Paper (JP)  
Treatment: General, Review (G)

Abstract: Desktop video conferencing (DVC) systems are much more flexible than VC. Any state-of-the-art PC, Apple Macintosh or workstation can be converted into a desktop conference centre by plugging in a camera and an adapter board, connecting to a digital telephone line and installing some communications software. All the following applications-whiteboard for sharing notes and scribbles, shared access to text and figures, connection to a video recorder, sending high-quality still **images**, transferring **data files** -are **available** using **products** now coming on to the market or being pilot-tested. Some of these systems are briefly reviewed. (0 Refs)

Hardware/Software Compatibility: IBM PC; IBM PC Compatible  
Geographic Location: United States

Presents an unfavorable review of ExecuVision (\$395), an animated presentation graphics package, from Visual Communications Network of Cambridge, MA (617). Requires 256K, DOS 2.0 or later, two disk drives, and CGA or Hercules monochrome display, and runs on an IBM PC or compatible. Includes an outdated graphics program that cannot import data directly from spreadsheets and is "cumbersome" to use, a slide show sequencer and an image database. States that the highlight is the **image database**, but this is **available** with a better **product**, Concorde which is also sold by Visual Communications. Says that Execuvision does not include a screen capture function. (tjm)

ImageMate for Windows 95/NT from ImageWare Technologies is an application for clothing retailers that enables them to provide extremely personalized customer service by containing a database of searchable customer profiles with birthdays, professions, measurements, preferred colors, and a host of other personal information. An inventory-tracking function allows store owners to automatically tabulate salespeople's commissions based on data input at the point of sale. Digitized **images** can be **stored** in the database, automated office scheduling is generated whenever a salesperson inputs a request for tailoring or back- **ordering** , and daily **calendar** and tickler applications are created to notify staff of each customer's order status. The included word processor comes with many templates customized for apparel work, and built-in telemarketing functions include autodialing and prewritten scripts based on each customer's personalized information. Digital photographs integrated into ImageMate are taken of customers' purchases or even of when they wear various outfits, each stored for instant recall the next time the customer enters the store, in order to best advise them on future sales.

...ABSTRACT A2

The invention provides a method, system and computer-readable medium for storing \*images\* with related information in a relational database and using the information to order available products for a selected \*image\* over a network. Tag and business information may be associated with an \*image\* in the database and a unique \*image\* identifier is generated for each \*image\*. Different types of searches of the relational database may be performed including product based and \*image\* based. Affirmative results from searches are returned as \*images\* and/or products that are displayed in pages. The returned \*images\* also include information indicating available products. The selection of a returned \*image\* causes a cut-down version of the \*image\* and all of the available products to be displayed in the same page. When an...

...and products that are displayed to the user. A combination of user information, product information, \*image\* information and contextual

- (a) displaying a representation of the product in response to receiving contextual interaction information, the product being associated with information indicating each \*image\* that is available for use with the product;
- (b) in response to selecting the displayed...

...employing the information associated with the product to display at least a portion of the \*images\* available for use with the product; and

- (d) when the \*image\* is selected, enabling the product available for use with the \*image\* to be ordered by a user.
68. A system for placing an order for a product associated with an \*image\* over a network, comprising
- (a) a server for implementing logical actions, including:
    - (i) in response to receiving contextual interaction information from a client, providing the \*image\* to the client, the \*image\* being associated with information that indicates each available product for the \*image\*; and
    - (ii) in response to a request to order the available product for the \*image\*, enabling the product to be provided; and
  - (b) the client for implementing logical actions, including:
    - (i) providing the contextual interaction information to the server;
    - (ii) in response to receiving the \*image\*, automatically employing the information associated with the \*image\* to generate a representation of each product that is available for the \*image\*;
    - (iii) automatically displaying the \*image\* and the representation of each product that is available for the \*image\* in a page; and
    - (iv) when the representation of an available product is selected in the displayed page, enabling the available product for the \*image\* to be ordered from the server.
69. A method for enabling a product associated with...

purchase of a higher quality \*image\* associated with the related \*image\*.

48. A system for obtaining an \*image\* from a database for pasting into a document, the \*image\* being related to indicated text, comprising:

(a) a client process for causing functions to be...

...providing the query to the search engine, the search engine searching the database for an \*image\* that is related to the indicated text;

(iii) enabling a display of at least one related \*image\* indicated by the result from the query, the display of a related \*image\* being selectable for insertion into the document; and

(iv) displaying the related \*image\* that is inserted into the document, the related \*image\* being associated with the indicated text in the document; and.

(b) a server process for...

...the result from the query of the database, the result indicating when at least one \*image\* is related to the indicated text; and

(ii) enabling the search engine to locate at least one \*image\* in the database that is related to the indicated text.

49. The system of Claim...

...the client process causes further functions to be performed, comprising:

(a) indicating a higher quality \*image\* of the related \*image\* is to be purchased over a network;

(b) providing financial information to an electronic commerce service over the network, the electronic commerce service enabling the purchase of the higher quality \*image\* when the financial information is complete; and

(c) inserting the purchased higher quality \*image\* into the document so that the higher quality \*image\* is displayed with the indicated text.

50. A computer readable medium having computer-executable components...

...providing the query to the search engine, the search engine searching the database for an \*image\* that is related to the indicated text;

(c) a component for returning the result from the query of the database, the result indicating when at least one \*image\* is related to the indicated text;

(d) a component for enabling the display of at least one related \*image\* indicated by the result from the query, the display of the related \*image\* being selectable for insertion into the document; and

(e) a component for displaying the related \*image\* that is inserted into the document, so that the related \*image\* is associated with the indicated text in the document.

51. Method for electronically purchasing an \*image\* over a network, comprising:

(a) automatically creating a query related to an indicated object, the ...

...query to the search engine, the search engine searching the database for at least one \*image\* that is related to the indicated object;

(c) returning the result from the query of the database, the result indicating when at least one \*image\* is related to the indicated object;

(d) indicating a related \*image\* is to be purchased over the network, financial information being provided to an electronic commerce service that enables the purchase of the related \*image\* when the financial information is complete; and

(e) when the related \*image\* is purchased, enabling a display of the related \*image\*, so that the related \*image\* may be associated with the indicated object.

52. The method of Claim 51, wherein the...

...ABSTRACT for using indicated text to automatically query a search engine for a database and return **images** that are relevant to the indicated text. At least five integrated components are employed by a client program to get, view and use a returned **image**. A user interface component provides for automatically creating search criteria for a query from the indicated text and inserting a thumbnail or higher quality **image** into an open document. A metadata results component provides for managing the storing, parsing and displaying of the metadata results returned from a query of the database of **images**. A navigation component provides for managing user interface navigation elements that are employed to control the display of the results (thumbnail **images**) of the query, e.g., play, stop, back and next controls. An **image** binary data component provides for managing the display of returned **images** and managing the storage of the binary **image** data for the thumbnail and higher quality **images**. Also, a network component provides for detecting the presence of a network and its settings...

...ABSTRACT A2

The invention provides a method, system and computer-readable medium for storing **images** with related information in a relational database and using the information to order available products for a selected **image** over a network. Tag and business information may be associated with an **image** in the database and a unique **image** identifier is generated for each **image**. Different types of searches of the relational database may be performed including product based and **image** based. Affirmative results from searches are returned as **images** and/or products that are displayed in pages. The returned **images** also include information indicating available products. The selection of a returned **image** causes a cut-down version of the **image** and all of the available products to be displayed in the same page. When an...

**Distribution of products associated with image through network,  
involves automatically employing content of interaction to determine  
image to be displayed**

...Inventor: **RADCLIFFE W T**

Abstract (Basic):

... Content of an interaction is employed to determine an **image** to be displayed, which is associated with the information indicating each product that is available for use with the **image**. Information associated with **image** is employed automatically to generate a representation of each product. The **image** and the representation is automatically displayed in a page for providing available product on selection.

... a) Computer readable medium with instruction for enabling the product associated with **image** to be provided to user...

...b) System for enabling a product associated with an **image** to be provided to user...

...c) Method for enabling a product associated with an **image** to be ordered over a network...

...d) System for placing an order for a product associated with **image** over a network...

...For enabling product associated with **image** to be provided to user such as picture, electronic postcard, poster, slide show, puzzle, screen saver, calendar, cup, stationary, invitation, presentation, also for browsing relational database with products or **image** based searches, subscription pushes and hyperlinks that are associated with products or categories...

...Enables updated information related to new products and **images** to be sent to a subscriber. Enables the presentation of available **images** and related products to be customized according to the type of subscription that a user...
